DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-42 and 47-84, drawn to an optical communication system, classified in class 398, subclass 208.
 - II. Claims 43-46, drawn to an apparatus for compensating optical signal dispersion, classified in class 333, subclass 204.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the instant case is an example of the scenario presented in MPEP 806.05(c), section III. That is, some combination claims recite specific features of the subcombination but other combination claims give evidence that the subcombination is not essential to the combination.

This situation can be diagrammed as combination ABsp (claims 47-84, "sp" is an abbreviation for "specific"), combination ABbr (claims 1-42, "br" is an abbreviation for "broad"), and subcombination Bsp (claims 43-46). Claims ABbr (claims 1-42) are evidence claims which indicate that the combination does not rely upon the specific details of the subcombination for its patentability. If claims ABbr are subsequently found to be unallowable, the question of rejoinder of the inventions restricted must be considered and the letter to the applicant should so state. Therefore, where the combination evidence claims ABbr do not set forth the details of

Art Unit: 2633

the subcombination Bsp and the subcombination Bsp has separate utility, the inventions are distinct and restriction is proper if reasons exist for insisting upon the restriction.

Additionally, the subcombination has separate utility such as a phase filter for compensating electrical signal dispersion.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
